

COBS Lynx

An alarm and notification system for organizations who want to their critical messaging solution to be on-site within their local area network.

COBS Lynx is an Android application developed by COBS for distribution of critical alarm and messages on Android devices connected to 3rd party on-site systems. The solution fits in professional environments where uptime and security of the internet connection cannot be guaranteed and where interference is not an option. This is an app where mission-critical communication is of highest priority.

With Lynx, the customer organization supervise the entire alarm chain and has the possibility to customize the system and integrations according to specific needs.

Above are examples of how alarms can be presented within the Lynx app on a Versity 92 series and the Versity 95/96 series device.

COBS has developed COBS Lynx app specifically for use with Versity 92/95/96 smartphones while connected to the WLAN or Private APN network.

The Versity-range smartphones provides all the features our customers expect with regard to robustness, system integration capabilities, as well as personal alarm functionality by use of the physical alarm button.

Take control of your alarm chain

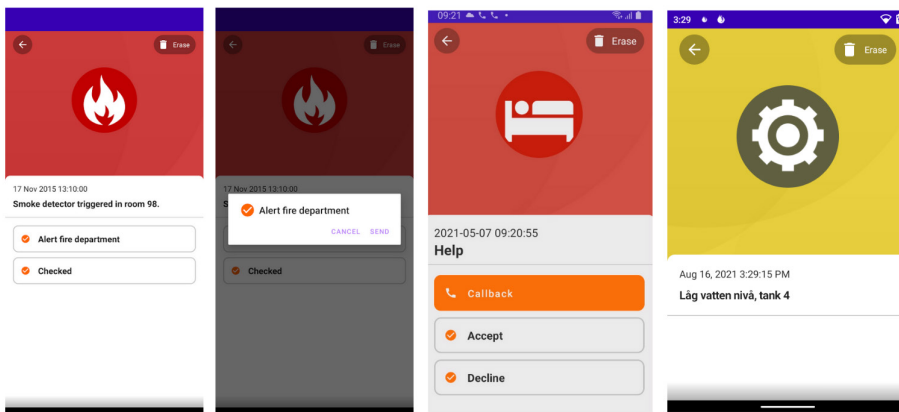

COBS mission is to contribute to a safe and secure workplace for the user. Lynx is no exception. By ensuring that the system is independent of external factors such as internet connection, external servers and public GSM networks, it provides that extra security to people in critical work environments. This also means there is less risk of unplanned downtime.

A simple user interface

Lynx has a simple user interface and is created to always indicate alarms in a professional and clear user interface with predefined symbols, signals, and colors. This is an intuitive app that doesn't require any prior knowledge. It helps users absorb the information, act, and efficiently manage their daily work quickly and easily.

Complement to DECT

COBS Lynx application can also be used as a complement alongside the existing DECT systems but is also suitable for new customers where a WLAN system has been implemented and requires safe and reliable alarm handling.

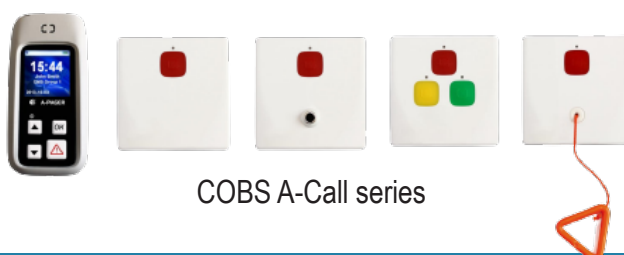

Wireless alarm buttons + Lynx

Our alarm buttons are wireless for quick and simple installation. They have continuous battery monitoring and can be configured to specific needs and requirements. Connect the alarms to your smartphone to receive real time feedback and information with an easy-to-use interface.

Wireless wall mounted devices

The COBS A-Call series of buttons are an excellent alternative when you need alarms for guests / patients / staff, where they can call for assistance and get confirmation feedback on the device. These fits well as wall mounted devices in for example RWC toilets, public areas or on fixed mobile equipment.

COBS A-Call series

Wireless mobile devices

The COBS PAT+ series of buttons can be worn as a necklace or as a wristband and is an alternative for individual use and where safety is of concern, for example accidents, threats or need for assistance. Can also be placed in e.g. reception or examination rooms. It alarms directly to security companies and / or for assistance depending on your wishes and needs.
