

DESCRIPTION

The COBS Lynx application for alert and personal alarm makes it possible to distribute messages fast and secure to mobile phones over the WLAN.

The COBS Lynx application connects to COBS backend system and integrates to Nurse Call Systems, Situation Awareness Systems (SAS), Physical Security Information Management (PSIM), Fire, Security and Access Control Systems, and more.

The COBS Lynx application provides a user-friendly interface and tool for the professional first-line workers and enables faster response times plus improved safety and security to corporate assets and resources.

The COBS Lynx application has the alarm, messaging and location functionality for Android smartphones. The Lynx app can be downloaded from Google Play store and requires COBS Message Server (CMS) and Mobile Device Manager (SMART Manager) as backend systems.

Features:

- Predefined icons, colors and alert tones to allow the user to quickly identify the alarm type.
- Possibility to customize and predefine alarm icons and tones.
- The alarm text size can be changed.
- Callback function (enables the possibility to answer, acknowledge and coordinate alarms via conference call).
- Prioritized alarm list always with the most prioritized alarm first.
- Possibility to prevent the user from manually removing an alarm from the alarm list. The alarm list is managed by the system.
- Location functionality (via NFC, BLE, WLAN) and integration enables an exact positioning and follow-up for guard routes and in the event of assault alarm.
- User notification when out of system coverage which gives the user the comfort of knowing that the system is operational for messages and alarms (receiving/sending to/from the unit).
- Predefined distribution lists for users, groups ensure that the right users and teams receive the alarm.
- Possibility to standardize answering alternatives provides well defined feedback to the receiving users and minimize stress in case of an alarm.

COBS Lynx is available on the [Google Play Store](#).

NOTE: To utilize the COBS Lynx application, your facility must have an installed COBS Messaging System (CMS), Mobile Device Manager (SMART Manager) with associated user license, configuration, and connectivity for your specific facility.

SPECIFICATIONS

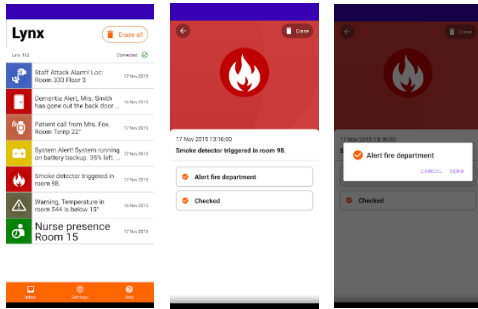

INTEROPERABILITY (Verified mobile devices)

- Versity series
